

# Creatures of the Night

Thurs Oct 4th  
6:30 to 8:30pm

337 East Milton Ave Rahway NJ

The Rahway River Watershed Association welcomes Stephanie Feigin from Conserve Wildlife Foundation of NJ to give an educational presentation about the bats of NJ.

**Bats have a reputation of being spooky or dangerous, but they are actually some of the most beneficial animals to people.**

All of New Jersey's bats are insectivores. They feed on a huge variety of night-flying insects, including the beetles that devour our crops, the gypsy moths that denude our forests, and of course, those awful mosquitoes. A single little brown bat can eat 3,000 mosquito-sized insects per night!

**Call 908-892-7229 for more information**

## Bats of New Jersey By Stephanie Feigin

Stephanie is a Wildlife Ecologist for Conserve Wildlife Foundation of NJ. She is CWF's lead ecologist running the bat project. She is responsible for projects designed to protect and enhance habitats for forest bats throughout New Jersey. Stephanie received her B.S. in Ecology & Natural Resource Management from Rutgers University in 2013.

Stephanie will bring a **LIVE BAT** to the presentation!
